

FUND PROFILE

The Fairtree Balanced Prescient Fund is an actively managed multi asset class fund. The fund is suitable for investors looking for moderate to high capital growth in excess of inflation with moderate to aggressive risk appetite. It suits investors with an investment horizon of more than 3 years and who prefer to have the asset allocation decision made for them. The fund complies with Regulation 28 and is therefore suitable for retirement savings.

INVESTMENT OBJECTIVE

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The fund is managed against a composite benchmark that also forms the strategic asset allocation for the fund.

INVESTMENT POLICY

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities whilst up to 25% of the fund may be invested in foreign securities. The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

Benchmark:	60% FTSE/JSE Shareholder Weighted Total Return Index + 40% JSE/All Bond Total Return Index
Analysis Currency:	ZAR
Minimum Investment:	R50,000 Lump sum or R1,000 p/m debit order

Please see Disclosures and Glossary section for further information on Cost Ratios

Income Distribution:

Declaration:	Annually (March)
Payment:	1st working day of April
Distribution Total for the past 12 months:	2.16 cents per unit
Management and administration:	Prescient Management Company (RF) (Pty) Ltd
Valuation time of fund:	15:00
Transaction cut-off time:	15:00

RISK PROFILE

Risk Level: Moderate - Aggressive

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

MARKET COMMENTARY

Market volatility has risen over the last 6 months as investors are becoming more fearful of inflationary forces and its effect on bond yields. As long as bond yields coincide with better growth the overall macro environment should remain healthy, but global economic data has moderated recently causing market participants to question high valuations and the current policy framework. Going forward higher bond yields will increase volatility, but the upward trend should remain in place until policy rates and financial conditions have tightened too much.

The recent rise in global bond yields has again put pressure on risk assets, including South Africa, as increased bonds issuance by the US Treasury, an improved growth outlook and concerns around higher inflation pushed the US 10yr yield to 3%. In South Africa the risk of a negative outcome to current wage negotiations and concerns that the market had priced in too much in terms of good news and potential rate cuts has also weight on local bond yields. The equity market however benefitted from a weaker ZAR.

Since the SARB delivered a hawkish 0.25% rate cut in March the market has reduced the probability of another interest rate cut to less than 30% over the next 12 months. We believe the hurdle for another cut remains high and that risk to future inflation is tilted to the upside. A weaker ZAR, higher oil price and reduced output gap will keep the SARB from delivering another cut in May. The outcome of the latest round of wage negotiations will be important to future inflation expectations.

While some economic data points have improved over the last few months and analysts have upgraded their growth forecast, data remains mixed on aggregate. Manufacturing is performing worse than expected and the forward looking PMI's does not yet reflect a faster growing economy. Retail sales, credit extension and vehicle sales have improved more than expected but remains at low levels. Consumer and business confidence have improved over the last few months and point to potential future upside. Concerns around the most recent round of wage negotiations and uncertainty around land reforms has cautioned some investors.

The outlook for developed market growth remains strong. Growth in Europe has moderated somewhat as deflationary forces continue to weigh on the economy. The effect of recent Euro strength, higher oil prices and rising bond yields will work its way through the economy before we see renewed strength later this year. In the US we expect growth to moderate but to remain at a solid pace supported by growth in household consumption, investment and government spending. The Fed remains on course to hike rates 3 more times this year while the ECB will halt asset purchases in December. Overall we believe financial conditions remain accommodative and should see risk assets rise over the next few months. We also expect conditions to turn tight in 18 to 24 months.

Commodity prices are holding up despite a stronger US dollar as demand remains strong and the Chinese growth outlook stable. The oil price has risen on the back of increased demand, the risk that Iran may be sanctioned and that OPEC will continue with current production cuts.

The combination of higher yields and stronger US dollar has put pressure on global risk assets including high yielding emerging market assets. Both Turkey and Argentina has fallen into crisis and had to hike rates to protect against capital outflows. South African assets have also come under pressure but we believe the continued improvement in global growth and gradual rise in inflation will contain the recent emerging market sell-off. However, we continue to watch risks around the continued trade conflict between the US and China, higher oil prices and the pace of US rate hikes.

Equities: The outlook for global earnings growth remains positive supported by the economic expansion and below target inflation. We expect global inflation to pick up over the medium term supported by easy financial conditions and looser fiscal policies. The global deflationary outlook created positive sentiment around cyclical and value orientated stocks, while the outlook for higher global bond yields will put pressure on high valuation defensive names. As yields rise and volatility increase valuations will be tested more frequently. We believe the overall South Africa equity index will follow global equity markets higher due to its externalised nature. We have turned more optimistic on domestic equities as we believe economic activity will improve over the next 12 months. We like global cyclical companies with global earnings growth potential and companies with the ability to generate cash sustainably.

Fixed Income: South Africa's inflation will remain low over the next few months driven by low food prices, strong ZAR and soft demand. The SARB has cut interest rates twice and will be hard pressed to cut again. South Africa's level of yields remains attractive. The focus on the search for yield by global investors and stable emerging market backdrop may support lower bond yields, however the fiscal outlook remains challenging.

Currency: We believe the US dollar will strengthen over the short to medium term as the market price in a faster pace of rate hikes. However the ECB will also be looking to halt its asset purchase program later this year which may support the EUR. The short term outlook for the Rand is stable, but we believe the currency will depreciate towards the second half of 2018 as the emerging market backdrop turns less healthy.

Alternatives: Stronger global growth will allow less accommodative monetary policy and looser fiscal policies which should lead to higher interest rates, volatility and lower correlations amongst asset classes and securities. Market rotations and increased dispersion has typically led to a more favourable environment for alternative assets to perform.

GLOSSARY

Annualised performance	Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest return	The highest and lowest returns for any 1 year over the period since inception have been shown.
NAV	The net asset value represents the assets of a Fund less its liabilities.
Alpha	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio	The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio	The Sortino Ratio is used to measure the risk-adjusted return of the fund.
Standard Deviation	The deviation of the return stream relative to its own average.
Max Drawdown	The maximum peak to trough loss suffered by the Fund since inception.
Max Gain	Largest increase in any single month.
% Positive Month	The percentage of months since inception where the Fund has delivered positive return.
Average Duration	The weighted average duration of all the underlying interest bearing instruments in the Fund.
Average Credit quality	The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).
Dividend Yield	The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price per share.
PE Ratio	The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.
High Water Mark	The highest level of performance achieved over a specified period.
Total Expense Ratio (TER%)	The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%)	The Performance Fee is a payment made to the Fund Manager for generating positive returns, and is generally calculated as a percentage of investment profits, often both realized and unrealized.
Transactions Costs (TC%)	The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = (TER (%) + TC (%)	The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Money market Funds are priced at 1pm all other Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
