

FUND PROFILE

The Fairtree Balanced Prescient Fund is an actively managed multi asset class fund. The fund is suitable for investors looking for moderate to high capital growth in excess of inflation with moderate to aggressive risk appetite. It suits investors with an investment horizon of more than 3 years and who prefer to have the asset allocation decision made for them. The fund complies with Regulation 28 and is therefore suitable for retirement savings.

FUND OBJECTIVE

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The fund is managed against a composite benchmark that also forms the strategic asset allocation for the fund.

INVESTMENT POLICY

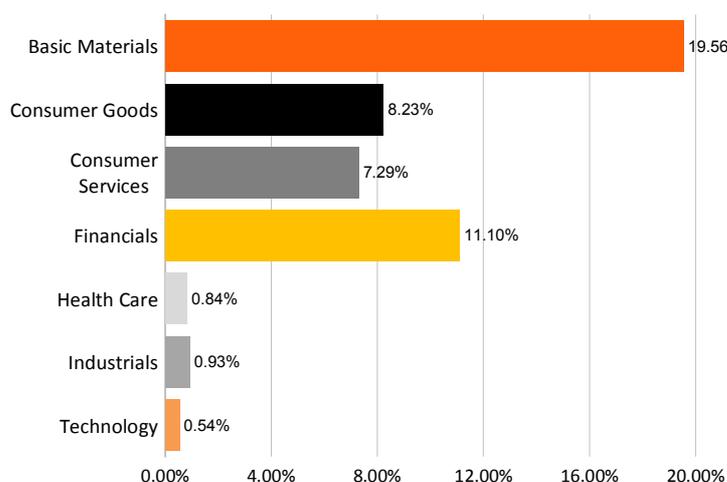

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities whilst up to 25% of the fund may be invested in foreign securities.

The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

FUND INFORMATION

Portfolio Manager(s):

Jacobus Lacock (Asset Allocation)
B Comm(Financial Economics), CFA
Joined Fairtree in 2011

Stephen Brown (SA Equity)
B Comm, MBA, CFA
Joined Fairtree in 2011

Rademeyer Vermaak (Global Equity)
M Eng (Electronic), CFA
Joined Fairtree in 2012

Paul Crawford (Fixed Income)
BSc Eng(Elec), MBA, CFA
Joined Fairtree in 2013

Inception date:	18 April 2017
Fund size (in Millions):	R 0.99
JSE code:	FBPA1
Unit Price:	98.21
ISIN Number:	ZAE000236360
Domicile:	South Africa
Fund Structure:	CISCA (Unit Trust)
Fund Category:	SA Multi-Asset High Equity
Regulation 28 Compliant:	Yes

Cost Ratios (incl. VAT):

Total Expense Ratio (TER%):
Performance fee incl. in TER (%) (PF%):
Transactions Costs Ratio (TC%):
Total Investment Charges (TIC%):

The TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available. The best estimate of the TER, TC and TIC will be shown as at 31 July 2017.

Fees:

Initial Fee - Adviser (incl. VAT): 0%
Annual management fee: 1.425% (incl. VAT)
Performance fee: N/A

Benchmark:

60% FTSE/JSE Capped Shareholder Weighted Total Return Index (Capped SWIX) + 40% JSE/All Bond Total Return Index.

Analysis Currency:

ZAR

Minimum Investment:

R50,000 Lump sum or R1,000 p/m debit order

Please see Disclosures and Glossary section for further information on Cost Ratios

Income Distribution:

Declaration:	March (Annually)
Payment:	1st working day of April
Distribution Total for the past 12 months:	N/A
Management and administration:	Prescient Management Company (RF) (Pty) Ltd
Valuation time of fund:	15:00
Transaction cut-off time:	15:00

RISK PROFILE

Risk Level: Moderate - Aggressive

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

GLOSSARY

Annualised performance	Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest return	The highest and lowest returns for any 1 year over the period since inception have been shown.
NAV	The net asset value represents the assets of a Fund less its liabilities.
Alpha	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio	The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio	The Sortino Ratio is used to measure the risk-adjusted return of the fund.
Standard Deviation	The deviation of the return stream relative to its own average.
Max Drawdown	The maximum peak to trough loss suffered by the Fund since inception.
Max Gain	Largest increase in any single month.
% Positive Month	The percentage of months since inception where the Fund has delivered positive return.
Average Duration	The weighted average duration of all the underlying interest bearing instruments in the Fund.
Average Credit quality	The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).
Dividend Yield	The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.
PE Ratio	The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.
High Water Mark	The highest level of performance achieved over a specified period.
Total Expense Ratio (TER%)	The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) (PF%)	The Performance Fee is a payment made to the Fund Manager for generating positive returns, and is generally calculated as a percentage of investment profits, often both realized and unrealized.
Transactions Costs (TC%)	The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges (TIC%) = (TER % + TC)	The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

MARKET COMMENTARY

Equity and bond market volatility has dropped to multi year lows and remain at low levels despite a moderate increase towards month end. Low market volatility can be attributed to; growth moderation in the US and China, lower global inflationary pressures from oil and wages and a disappointing outlook for fiscal support in the US. As a result, the outlook for monetary policy has remained highly accommodative, allowing the US dollar to weaken while developed market equities performed well alongside emerging market assets. While volatility is low and central banks ready to support markets, quality become less important. This explains why South African government bonds and the Rand has done surprisingly well during the second quarter, despite increased political and fiscal deterioration.

Towards month end central bankers injected some short lived liquidity into the market as they pushed back push back against market complacency. At the annual ECB Forum event ECB President, Mario Draghi and BoE Governor, Mark Carney made statements that future monetary policy will be less accommodative as economies strengthen. This less accommodative policy stance by global central banks includes; less asset purchases, smaller balance sheets and higher interest rates. German bunds led the sell-off as yields jumped more than 25bps while the curve steepened. Global bonds followed the move and emerging market assets came under pressure.

As economic data continue to strengthen globally, bond yields will have to rise further. This is particularly true for Europe where economic data continued to print better than expectations. More recently economic data has improved in both the US and China. US labour data showed that 222 thousand jobs was created during June, more than expected, and economic activity in China remains solid despite a moderation in housing and infrastructure. We believe economic activity will continue to improve in the US and that inflationary pressures will return during the second half of 2017, supported by a higher oil price and weak US dollar. This will allow the Fed to hike once more during 2017 while also announcing a reduction in their balance sheet. The ECB should follow with further tapering of asset purchases.

In South Africa growth continues to surprise to the downside as the most recent PMI survey points to a further contraction in economic activity. The current recession is being fuelled by depressed business and consumer confidence as the political landscape and future economic policies remains uncertain. Despite the weak growth outlook, the South African Central Bank (SARB) is unlikely to cut interest rate soon. Recent comments from SARB officials suggest that rate cuts will do little to boost growth given the lack of confidence and emphasised that weak growth is a result of structural deficiencies. On the inflation front, the outlook continues to point to a lower trajectory, but the SARB remains cautious given the potential for ratings downgrades and political risks. The SARB will only cut rates once the outlook for inflation and inflation expectations move closer the mid-point of the 3-6% target range. We only expect rate cuts later in the year.

Deteriorating growth and fiscal dynamics has increased the risk of further local debt ratings downgrades to sub investment grade by year end. South Africa faces exclusion from Citi's World Government Bond Index (WGBI) once both S&P and Moody's have downgraded South Africa to sub investment grade. This potential outcome will continue to drag on government bonds and the Rand.

Equities: The outlook for global earnings growth remains strong supported by the gradual economic recovery. We expect global inflation to pick up over the medium term supported by easy financial conditions and looser fiscal policies. The global reflationary outlook created positive sentiment around cyclical and value orientated stocks, while the outlook for higher global bond yields will put pressure on high valuation defensive names. We believe the overall South Africa equity index will follow global equity markets higher due to its externalised nature. We remain cautious on domestic equities although we believe that economic activity will improve over the next 18 months. We will be more constructive once we have more political certainty. We favour global cyclical companies with global earnings growth potential and companies with the ability to generate cash sustainably.

Fixed Income: South Africa's inflation will improve over the next 12 months as food prices fall, the currency remains on strong footing and growth remains weak. However, political risks and risks of further credit downgrades over the medium term should keep the SARB relatively neutral and on hold for the next few months. The focus on the search for yield by global investors and potential for a reduction in the political risk premium may support lower bond yields, however in the short term we remain cautious.

Currency: We believe the US dollar will trade stronger from current levels, until the ECB become more serious about reducing asset purchases. We see the Rand at close to fair value, but see risks for some depreciation. Softer commodities and stronger US dollar will be balanced by an improving trade balance which should continue to support the Rand. Domestic political risk and a global policy mistake remain the key risks for the currency.

Alternatives: The global driver of growth is slowly shifting from easy monetary policy to easier fiscal policies, and combined with the outlook for higher interest rates has resulted in lower correlations amongst key macro variables. Market rotation and increased dispersion amongst asset classes and sectors has led to a more favourable environment for alternative assets to perform.

DISCLAIMER

Management Company: Prescient Management Company (RF) (Pty) Ltd., **Registration number:** 2002/022560/07, **Physical address:** Prescient House, Westlake Business Park, Otto Close, Westlake, 7945 **Postal address:** PO Box 31142, Tokai, 7966. **Telephone number:** 0800 111 899 **E-mail:** info@prescient.co.za **Website:** www.prescient.co.za

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Money market Funds are priced at 1pm all other Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
