

Fairtree Balanced Prescient Fund

Minimum Disclosure Document - Class A1

FUND PROFILE

The Fairtree Balanced Prescient Fund is an actively managed multi asset class fund. The fund is suitable for investors looking for moderate to high capital growth in excess of inflation with moderate to aggressive risk appetite. It suits investors with an investment horizon of more than 3 years and who prefer to have the asset allocation decision made for them. The fund complies with Regulation 28 and is therefore suitable for retirement savings.

INVESTMENT OBJECTIVE

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The fund is managed to outperform the South African - Multi Asset - High Equity peer group benchmark.

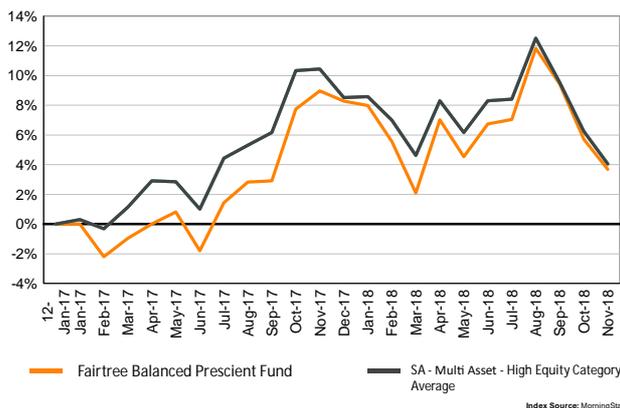

INVESTMENT POLICY

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities. The fund may invest a maximum net foreign exposure of 30% and 10% Africa (excl. South Africa). The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

Declaration:	Annually (March)
Payment:	1st working day of April
Distribution Total for the past 12 months:	2.16 cents per unit
Management and administration:	Prescient Management Company (RF) (Pty) Ltd
Valuation time of fund:	15:00
Transaction cut-off time:	15:00

RISK PROFILE

Risk Level: Moderate - Aggressive

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

PERFORMANCE SUMMARY

	Fairtree Balanced Prescient Fund	SA Multi Asset High Equity Category Average
--	----------------------------------	---

Performance comparison

Inception date	Jan-17	Jan-17
Current month	Nov-18	Nov-18

TOP 10 HOLDINGS

MARKET COMMENTARY

Emerging market assets outperformed developed markets over the month as sentiment improved. Early in the month the US mid-term elections produced a split congress with the Republicans retaining the Senate but losing the House to the Democrats. These results dampened expectations of a fresh round of tax cuts and raised expectations of a cease fire on the trade conflict between the US and China. This backdrop along with softer incoming US data gave the Fed some scope to dial back on their hawkish narrative. The market responded by reducing the number of hikes expected by the Fed during 2019, from two to one and the real rate dropped taking US 10 year bond yields from a 3.25% peak to below 3%. Lower rates and softer outlook for the US has also added pressure on the US dollar to weaken. Other factors supporting emerging markets has been 30% drop in oil price over the last two months and policy makers in China announcing measures to support the consumer via lower taxes.

Growth outside the US remains weak. Weakening Chinese economic activity and the threat of increased tariffs should be offset by easing measures taken by Chinese authorities. However we only expect the Chinese data to stabilise during H1-2019. European economic activity has also slowed with Germany recording negative growth over the third quarter and political and fiscal challenges in France and Italy curbing investor confidence. We expect the ECB to remain accommodative for a prolonged period with the possibility of announcing another round of low interest lending measures (i.e. LTRO's) to support activity. In the UK uncertainty around Brexit is also weighing on growth. However, the biggest risk to emerging markets and global risk assets remains deterioration in the US/China relationship.

Locally economic data remains weak, while concerns around fiscal and reform policies have grown. Renewed operational and financial challenges around Eskom and uncertainty around land policies continue to weigh on investor confidence and the country's credit rating. After two quarters of negative growth South Africa recorded stronger than expected growth over Q3 of 2.2% annualised supported by manufacturing, retail activity, financial services and agriculture. The SARB decided to hike rates to 6.75% earlier in the month, noting that the risks to inflation have increased enough to act. No mention was made about future hikes. We believe any further hikes depend on some of the upside risks mentioned actually materialising. Currently inflation has been well behaved and continues to surprise somewhat to the downside but the risks remain to the upside.

Equities: The outlook for global earnings growth remains positive supported by above trend growth. We expect global inflation to pick up gradually over the medium term supported loose fiscal policies and higher input costs. The global reflationary outlook favours cyclical stocks, while the outlook for higher global bond yields weighs on high valuation of defensive names. As yields rise and volatility increase valuations and earnings potential will be questioned more frequently. We believe the overall South Africa equity index will follow global equity markets higher due to its externalised nature. We remain cautiously optimistic on domestic equities as we believe economic activity will improve over the next 12 months. We like global cyclical assets with global earnings growth potential and companies with the ability to generate cash sustainably. We continue to find protection in gold stocks and ZAR hedged assets.

Fixed Income: South Africa's inflation will rise over the next few months. Given current weak economic activity and rising inflationary pressures the SARB will be cautious in raising rates. The SARB remains focussed on anchoring inflation expectations closer to 4.5%. Yields have risen to reflect growth and fiscal (e.g. Eskom) weakness. We look for signs of an improvement in the emerging market back drop and local economic environment to become more constructive on bonds.

Currency: We believe the US dollar strength has stabilised. Given the potential for global growth to converge we believe the US dollar could weaken over the medium term.

Alternatives: Stronger global growth will allow less accommodative monetary policy and looser fiscal policies which should lead to higher interest rates, volatility and lower correlations amongst asset classes and securities. Market rotations and increased dispersion has typically led to a more favourable environment for alternative assets to perform.

GLOSSARY

Annualised performance	Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest return	The highest and lowest returns for any 1 year over the period since inception have been shown.
NAV	The net asset value represents the assets of a Fund less its liabilities.
Alpha	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio	The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio	The Sortino Ratio is used to measure the risk-adjusted return of the fund.
Standard Deviation	The deviation of the return stream relative to its own average.
Max Drawdown	The maximum peak to trough loss suffered by the Fund since inception.
Max Gain	Largest increase in any single month.
% Positive Month	The percentage of months since inception where the Fund has delivered positive return.
Average Duration	The weighted average duration of all the underlying interest bearing instruments in the Fund.
Average Credit quality	The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).
Dividend Yield	The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.
PE Ratio	The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.
High Water Mark	The highest level of performance achieved over a specified period.
Total Expense Ratio (TER%)	The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%)	The Performance Fee is a payment made to the Fund Manager for generating positive returns, and is generally calculated as a percentage of investment profits, often both realized and unrealized.
Transactions Costs (TC%)	The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = (TER (%) + TC (%)	The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
