

Fairtree Balanced Prescient Fund

Minimum Disclosure Document - Class A1

FUND PROFILE

The Fairtree Balanced Prescient Fund is an actively managed multi asset class fund. The fund is suitable for investors looking for moderate to high capital growth in excess of inflation with moderate to aggressive risk appetite. It suits investors with a long term investment horizon who prefer to have the asset allocation decision made for them. The fund complies with Regulation 28 and is therefore suitable for retirement savings.

INVESTMENT OBJECTIVE

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The fund is managed to outperform the South African - Multi Asset - High Equity peer group benchmark.

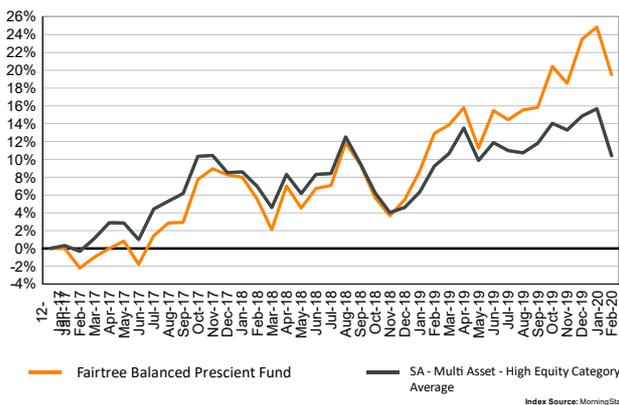

INVESTMENT POLICY

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities. The fund may invest a maximum net foreign exposure of 30% and 10% Africa (excl. South Africa). The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

Management Company:	Prescient Management Company (RF) (Pty) Ltd
Valuation time of fund:	15:00
Transaction cut-off time:	15:00

RISK PROFILE

Risk Level: Moderate - Aggressive

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

TOP 10 HOLDINGS

MARKET COMMENTARY

Global markets fell aggressively in February and the sell-off continued into March to record the first global bear market since 2008 and it took only 16 days, the fastest over the last 60 years. US 10-year treasuries dropped -36bps taking the year to date drop with year to date drop now -100bps as investors looked for safety. The 10-year SA government bond (R2030) yield closed 14bps higher 9.11% and the All Bond Index dropped -0.4% while the All Share Index declined -9%. The Rand lost around 4% against the US dollar. Foreigners continue to sell local bonds.

Coming into 2020 underlying global economic activity has shown signs of improvement with fading trade tension, improving manufacturing activity and accommodative central bank policy. The global economy has now been hit with two shocks; Covid-19 and oil price war. Prior to these two events some pockets of the market have re-rated to elevated levels which we viewed unsustainable.

Current market volatility reflects significant uncertainty around the Covid-19 outbreak, the impact of containment measures, and the oil price war between Russia & Saudi Arabia. In Asia; China, South Korea, Singapore and Hong Kong has implemented aggressive containment measures which has been successful in containing and slowing down the spread of the corona virus. Measures taken in Europe and the US has not delivered the same results yet.

Economic data has weakened meaningfully in China and will weaken in Europe and US over the next months. We will see negative growth for Q1 in China and close to zero growth in other global markets. However, activity in China has started to pick up as the number of new cases decreased. We expect China to show a recovery over Q2. We only see a recovery in US and Europe later this year. Global earnings will come under more pressure given the combination of the demand and supply shock delivered by containment measures and impact on energy companies. Offsetting these pressures are the drop in oil prices which should be good for global consumers, lower interest rates, lower US dollar and the strength with which the US consumer entered this year. Given current financial conditions and outlook for further policy easing we believe a recovery will be at play during H2-2020, under the most likely assumption that Covid-19 will fade towards mid-year.

Recent price action has put pressure on liquidity and market functioning. The Fed's 50bps cut earlier in the month and asset purchase announcements was aimed at reducing these pressures. We believe the Fed and global central banks will continue to ease financial conditions via rate cuts and potentially asset purchases. We also believe that targeted fiscal measures would be announced by various governments.

Equities: Equities have de-rated and the outlook for global earnings growth has weakened with a high degree of uncertainty. However, aggressive central bank and fiscal policies will provide some support to equities. It's too early to get excited about local equities. We do believe that the domestic economy will start to benefit from interest rate cuts and more economic reforms, but this will take time. We like selected local and global exposed cyclical assets with strong global earnings growth potential and companies with the ability to generate cash sustainably. We like resources given tight supply and relative attractiveness of China vs other markets.

Fixed Income: South Africa's inflation remain low while inflation expectation decreases further. Given current weak economic activity and downside risk to inflation the SARB may continue with its rate cut cycle.

Currency: We believe the US dollar strength has stabilised and that recent uncertainty around US growth and potential for aggressive policy action could drive US dollar lower.

Alternatives: We believe higher levels of volatility amongst asset classes and securities will increase dispersion and lead to a more favourable environment for alternative assets to perform.

SPECIFIC RISK

- Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
- Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
- Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
- Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
- Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
- Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
- Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
- Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

GLOSSARY

Annualised performance	Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest return	The highest and lowest returns for any 1 year over the period since inception have been shown.
NAV	The net asset value represents the assets of a Fund less its liabilities.
Alpha	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio	The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio	The Sortino Ratio is used to measure the risk-adjusted return of the fund.
Standard Deviation	The deviation of the return stream relative to its own average.
Max Drawdown	The maximum peak to trough loss suffered by the Fund since inception.
Max Gain	Largest increase in any single month.
% Positive Month	The percentage of months since inception where the Fund has delivered positive return.
Average Duration	The weighted average duration of all the underlying interest bearing instruments in the Fund.
Average Credit quality	The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).
Dividend Yield	The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price per share.
PE Ratio	The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.
High Water Mark	The highest level of performance achieved over a specified period.
Total Expense Ratio (TER%)	The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%)	The Performance Fee is a payment made to the Fund Manager for generating positive returns, and is generally calculated as a percentage of investment profits, often both realized and unrealized.
Transactions Costs (TC%)	The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = (TER % + TC %)	The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Carl Cronje and Old Oak Road, Bellville, 7530. **Postal address:** PO Box 4124, Tygervalley, 7536. **Telephone number:** +27 86 176 0760. **Website:** www.fairtree.com.

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
