

Fairtree Balanced Prescient Fund

Minimum Disclosure Document - Class A1

FUND PROFILE

The Fairtree Balanced Prescient Fund is an actively managed multi asset class fund. The fund is suitable for investors looking for moderate to high capital growth in excess of inflation with moderate to aggressive risk appetite. It suits investors with an investment horizon of more than 3 years and who prefer to have the asset allocation decision made for them. The fund complies with Regulation 28 and is therefore suitable for retirement savings.

INVESTMENT OBJECTIVE

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The fund is managed to outperform the South African - Multi Asset - High Equity peer group benchmark.

INVESTMENT POLICY

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities. The fund may invest a maximum net foreign exposure of 30% and 10% Africa (excl. South Africa). The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

Income Distribution:

Declaration:	Annually (March)
Payment:	1st working day of April
Distribution Total for the past 12 months:	3.30 cents per unit
Management Company:	Prescient Management Company (RF) (Pty) Ltd
Valuation time of fund:	15:00
Transaction cut-off time:	15:00

RISK PROFILE

Risk Level: Moderate - Aggressive

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

TOP 10 HOLDINGS

MARKET COMMENTARY

Global markets performed well over the first two weeks but ended the month mixed as investors shifted towards safe havens. The 10-year government bond (R2030) yield closed -5bps lower at 8.97%. The All Bond Index returned 1.2% over the month to bring the 12 months return to 8.5%, while the All Share Index declined -1.7% to bring the 12 months return to 7.1%. The Rand lost around 6.8% against the US dollar. Foreigners bought more than R7bn local bonds during the month. Global equities dropped -0.7%, emerging market equities dropped -4.7% and the oil price was down -15%. Safe haven assets rallied as the US 10year yield dropped -41bps and gold price rose almost 5%.

The global recovery that started towards the end of last year continued into 2020 as the US and China signed a phase one trade deal, global central banks affirmed its bias towards an accommodative policy stance and global manufacturing continued to show signs of improvement. The positive sentiment gave way to concerns around the impact of the corona virus outbreak on global growth. The outbreak that started in China's Hubei province has been met with pro-active and aggressive measures. As a result economic activity across manufacturing and service sectors have stalled for a prolonged period. Only when the Corona virus has been contained will activity pick up meaningfully. We are already seeing signs that the outbreak maybe peaking soon and expect a meaningful recovery in activity over the second quarter. The Chinese authorities will use all means possible to ensure social stability and strong economic growth.

We believe the global recovery remains intact but restrained by the corona virus outbreak. Economic data from the US point towards a strong labour market and healthy consumer as financial conditions remain easy. Housing data has improved further and consumer confidence are rising. Manufacturing activity has also picked up again after a few soft months. Economic data from China and Europe have also showed signs of stabilisation and improvement.

In South Africa, the political and economic reforms are progressing at a slow pace. Operational and financial challenges at Eskom pose the biggest downside risk to the economy. We expect 2019 growth to be weak along with a weak Q4-19 due to load shedding. Growth estimates for 2020 have been cut to around 0.5 to 1% and inflation continue to fall. The SARB decided to cut rates by 0.25% at its January meeting and more cuts are likely over the rest of the year. Over the short term the main risk events are the February Budget and Moody's ratings review in March. We expect a budget that points towards fiscal austerity and more pragmatic approach to solve financial woes at SOE's including Eskom and SAA given new management.

Equities: The outlook for global earnings growth has moderated but remain positive. However, accommodative central bank policies and low yields will continue to provide some support to equities. We do not expect a US recession soon and expect global inflation to gradually move closer to target supported by higher input costs, including wages. It's too early to get excited about local equities. We do believe that the domestic economy will start to benefit from interest rate cuts and more economic reforms, but this will take time. We like selected local and global exposed cyclical assets with strong global earnings growth potential and companies with the ability to generate cash sustainably. We like resources given tight supply and good demand outlook and continue to find protection in gold stocks and ZAR hedged assets.

Fixed Income: South Africa's inflation remain low while inflation expectation decreases further. Given current weak economic activity and balanced risk to inflation the SARB may continue with its rate cut cycle but fiscal risk has increased meaningfully which warrants a gradual approach.

Currency: We believe the US dollar strength has stabilised although recent risk-off sentiment has supported the currency. Given the potential for the global growth outlook to improve again we believe the US dollar could weaken over the medium term.

Alternatives: Going forward we believe global monetary policy will be more data dependent while global fiscal policies will be used to support growth. We believe higher levels of volatility and lower correlations amongst asset classes and securities will increase dispersion and lead to a more favourable environment for alternative assets to perform.

SPECIFIC RISK

- Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- Derivatives risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
- Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
- Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
- Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
- Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
- Derivative counterparty risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
- Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
- Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

GLOSSARY

Annualised performance	Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
Highest & Lowest return	The highest and lowest returns for any 1 year over the period since inception have been shown.
NAV	The net asset value represents the assets of a Fund less its liabilities.
Alpha	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio	The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.
Sortino Ratio	The Sortino Ratio is used to measure the risk-adjusted return of the fund.
Standard Deviation	The deviation of the return stream relative to its own average.
Max Drawdown	The maximum peak to trough loss suffered by the Fund since inception.
Max Gain	Largest increase in any single month.
% Positive Month	The percentage of months since inception where the Fund has delivered positive return.
Average Duration	The weighted average duration of all the underlying interest bearing instruments in the Fund.
Average Credit quality	The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).
Dividend Yield	The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price per share.
PE Ratio	The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.
High Water Mark	The highest level of performance achieved over a specified period.
Total Expense Ratio (TER%)	The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.
Performance fee incl. in TER (%) PF (%)	The Performance Fee is a payment made to the Fund Manager for generating positive returns, and is generally calculated as a percentage of investment profits, often both realized and unrealized.
Transactions Costs (TC%)	The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.
Total Investment Charges TIC (%) = (TER (%) + TC (%))	The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Carl Cronje and Old Oak Road, Bellville, 7530. **Postal address:** PO Box 4124, Tygervalley, 7536. **Telephone number:** +27 86 176 0760. **Website:** www.fairtree.com.

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
