

FAIRTREE GLOBAL EQUITY PRESCIENT FUND

MINIMUM DISCLOSURE DOCUMENT - CLASS A3

INVESTMENT OBJECTIVE

The Fairtree Global Equity Prescient Fund aims to create medium to long-term capital growth. To pursue its objective, the fund invests in developed market shares, combining global screening models with the Fairtree active fundamental investment philosophy. The fund is constructed in a diversified manner and aims to provide returns above the benchmark while exhibiting a lower level of volatility in returns relative to the benchmark. The portfolio aims to provide returns above the benchmark.

INVESTMENT POLICY

The Fairtree Global Equity Prescient Fund is a global equity fund. The objective of Fund is to provide investors with long term capital growth by investing in global equity markets. In order to achieve this objective, the Fund will invest in selected shares across all industry sectors ranging across large, mid and smaller cap shares. The fund will be exposed to exchange rate risk. The fund may also invest in money market and the Manager may, at its discretion, include in the portfolio listed and unlisted financial instruments for the exclusive purpose of hedging any exchange rate risks.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)

CUMULATIVE PERFORMANCE

ANNUALISED PERFORMANCE (%)

	Fund	Benchmark
1 year	25.32	23.91
3 years	17.81	20.25
Since incep.	14.26	16.30
Highest rolling 1 year	35.07	33.00
Lowest rolling 1 year	-3.58	1.49

RISK AND FUND STATS

Since inception (p.a.)	Fund	Benchmark
Sharpe Ratio	0.52	0.66
Standard Deviation	15.51%	15.32%

2021	3.73%	-0.14%											3.58%

Since inception till 21 September 2020, the 0.50% fee class was used as this was the most expensive fee class at the time of launch.

MARKET COMMENTARY

The outlook for global growth has improved over the month. Vaccine roll-out has accelerated in the US and UK and Covid cases continue to drop globally. Economic data has improved, a reflection of the aggressive policy action, filtering into the real economy. Global bond yields are rising, reflecting the improved macro backdrop as well as rising inflation expectations. The sharp rise in bond yields has caught the attention of many Fed members, but financial conditions remain very easy for the US and the Fed will only act if current conditions start to impact their ability to reach their dual mandate. Despite better growth environment, pockets of the market are selling off as a result of higher bond yields. A sharp rotation from high multiple Technology stocks towards cyclical value stocks is taking place. For markets outside the US, it implies tighter financial conditions and a stronger US dollar. Uncertainty around when the Fed may start tapering asset purchases and how they may respond to higher inflation has created volatility.

Add to this rising oil prices (a tax on global consumers) and Biden's \$1.9trn fiscal package (a windfall to US consumers) and you may understand why the market is getting more concerned around rising inflation. Globally input prices are rising and labour markets are recovering fast. In the US the economy added almost 400k new jobs last month, despite cold weather. The unemployment rate now sits at 6.2%. We expect the US to perform very well over the next two quarters, largely driven by high household savings rate, increased investments and inventory restocking. In Europe, activity in the services sectors remain weak due to ongoing lockdown measures. Manufacturing is doing well, but the Covid vaccine roll out remain slow and cases count high.

Markets remain volatile as the VIX remain close to 30. Global equities were up 2.5% lead by value stocks, Energy stocks (+15%), Financials (+10%), Mining & Metals (+8%). Small caps were up (+4.9%). Emerging markets underperformed (+0.7%) over the month.

Commodities showed strong performance except for gold which was down -6.2% as safe haven demand dropped. Oil was up +18%, copper (+15%) and iron ore (+6%) benefited from ongoing strong China demand, tight supply conditions and acting as hedge to rising inflation expectations. The Trade Weighted US dollar strengthened +0.4%.

Expectation for future global earnings growth remain strong. Valuation for some US sectors have reached elevated levels and provide little margin of safety. Growth assets may come under pressure as bond yields are rising. However aggressive central bank and fiscal policies will continue to provide support to global equities. Further normalisation of activity and US dollar weakness may lead to global value and cyclical sector outperformance. During February, we added to our financial sector exposure. We like global exposed cyclical assets with strong balance sheets and global earnings growth potential. We like resources given tight supply and relative attractiveness of China vs other markets. We remain underweight Defensive sectors like Consumer Staples, Health Care and Utilities.

FAIRTREE GLOBAL EQUITY PRESCIENT FUND

GLOSSARY

Annualised Performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

SPECIFIC RISK

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

RISK INDICATOR DEFINITION

The Portfolio is more diversified than the benchmark, thus holding smaller positions in the largest capitalisation stocks than the benchmark. This comes with the risk of more volatile relative returns to the broader market when the largest stocks in the benchmark outperform. We believe however that this strategy of holding a more diversified portfolio results in lower single stock risk, and whilst there may be periods of underperformance when the large cap stocks rally, we firmly believe in efficient risk management on an absolute basis. The strategy is also exposed to various factors driving investment performance, for example Value and Momentum, and these factors may also experience periods of relative underperformance. Global research has shown however, that consistent long term exposure to these factors lead to investment reward. This portfolio is permitted to invest in foreign securities which may have additional risks (FX Movements for example). However, the portfolio does not currently hold any foreign securities and the manager does not intend on exposing the portfolio to any foreign securities going forward.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
